For this assignment, we shall write a paper critique for three recent papers that are related to topics we have already covered in the class.

The papers are listed as follows:

These papers are available online, via the IEEE Xplore website. (You have to log in from within WVU to view the papers)

For a given paper, your critique will be a summary of the paper with information on the basic problem the paper is trying to address, the major contribution of the paper, the new results produced, and the limitations and/or problems with the proposed approach. Based on the limitations/problems identified, you should suggest some improvements on the paper, or new ways of addressing the same problem the paper tried to address.

Start the critique for each paper on a separate page. Your critique cannot be more than 3 pages, for any given paper. Descriptions beyond the 3rd page will be ignored.

Submit your written critique in class on or before the due date. For email submission, only .pdf documents will be accepted.
